

Display and Merchandising

Different products require varying display times according to their core temperature. These must be considered to ensure the best quality and safe temperature for consumption is achieved. The Alan Nuttall Partnership Ltd does not accept responsibility for variances or losses of quality that occur due to product differences.

All items placed in Flexeserve Zone should be in the correct packaging/containers, in line with in-store procedures and best practice. Remove products in damaged packaging from the equipment and clean as soon as possible.

Do not obstruct the fan(s) at the rear of each zone as this can cause the built-in safety shut-off to activate and stop the equipment from working.

Product Probing

INFORMATION

Legal requirements dictate all products displayed for an extended period within any heated display area should be periodically probed throughout trading to ensure the core temperature of the product is above the legal holding temperature of the local authority. Refer to in-house operations manual for product probing instructions.

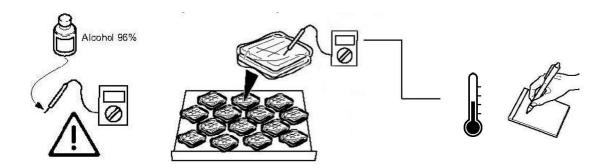

It is beneficial to enter the product into the holding unit as hot as possible for that particular food product to maximise shelf-life at the safe temperature.

The equipment is not designed to increase product temperature; the products gradually fall and regulate in temperature throughout the display period to ensure good product quality. It is critical that the entry core temperature is as high as possible so the maximum display time is achieved. The product will fall in temperature during its display time regardless of the entry temperature; therefore, a low entry temperature will reduce display time.

At the end of recommended display times, any unsold products should be removed, reduced and disposed of, in accordance with company and food safety standards.

The Alan Nuttall Partnership Ltd does not take responsibility for variances or loss of quality that may occur due to product differences.

Recording Product Temperatures

The core temperature of the products should be periodically probed and recorded according to local authority guidelines.
